

MIDO®

SWISS WATCHES SINCE 1918

Baroncelli GMT User's Manual

Fig. 1 Watch, dial side
1. Local time in Tokyo **10:10**
2. Time in Mexico City **19:10**

Fig. 2 Watch, case-back side

Setting the time

Pull the crown out to position **III** (the seconds hand will stop), and turn it either way until you reach the desired time. Once the hands (hour and minute) are in the desired position, push the crown back into position **I**.

Fast correction of the date

Pull the crown out to position **II**, and turn it backwards (**A**) until the desired date is displayed. Then push the crown back into position **I**. During this operation, your watch will keep running, and so there is no need for a time correction.

Quick GMT disc correction

Pull the crown out to position **II**, and turn it forward (**B**) until local time on the central disc is set to your time zone, and it corresponds to the time displayed by the hands. Then push the crown back into position **I**. During this operation, your watch will keep running, and so there is no need for a time correction.

Operation

The case-back of your MIDO watch shows the correspondences of the abbreviations for the various cities indicated on the dial (**Fig. 2**).

In our example, we are in Tokyo. The hour and minute hands are pointing to 10:10 and to the position **TYO**, and the disc is indicating **10**. The local time in another country is indicated by the central disc.

Examples: In Tokyo, it is 10:10; in Beijing (BEI), it is 09:10; in Bangkok (BKK), it is 08:10; in Mexico City (MEX), it is 19:10, etc.

Travelling

When travelling, you no longer have to make any settings. You need only read the time indicated by the disc in the region where you are.

Summer/Winter times

However, watch out for daylight saving time in certain regions.

For any further information on your MIDO watch, please refer to the user's manual.
